

\* Layer 2 is GND

\* Layer 3 is power

Since my battery is 25.5mm x 36mm & can't go on the bottom bc of the MAX30101 on the skin, I need to put the battery on the top. I also need a clearance for the antenna of the microcontroller to be unobstructed by the battery

therefore the PCB size selected is 26mm x 45mm <sup>antenna clearance space</sup>

# Layer 4
